

Tier Classification for Global SDG Indicators

21 September 2016

Introduction

This file contains the updated tier classification of the SDG indicators revised by the Inter-agency and Expert Group on SDG Indicators (IAEG-SDGs). The indicators were classified into three tiers based on their level of methodological development and data availability. The IAEG-SDGs reviewed the initial proposed tier classification that was presented at the 3rd IAEG-SDG meeting in Mexico City and examined additional information on data availability, internationally agreed methodologies and international standards in order to reach a decision on the tier classification for each indicator.

For most indicators, the initial proposed tier from the Mexico City meeting was confirmed by the IAEG-SDGs. However, in 25 cases, the IAEG-SDGs modified the tier classification based on their review of available information for the indicator. The IAEG-SDG updated tier classification can be found in column F on the following worksheet and the explanation for why an indicator changed tiers can be found in column G.

While this document contains the updated tier classification, the tier classification of many indicators will change in the coming years, as methodologies are developed and data availability increases. The IAEG-SDGs is working to develop a mechanism to approve changes in the tier classification and this mechanism will be discussed during the 4th IAEG-SDG meeting in Addis Ababa in October 2016.

Below, please find the definitions of the three indicator tiers.

Tier 1: Indicator conceptually clear, established methodology and standards available and data regularly produced by countries

Tier 2: Indicator conceptually clear, established methodology and standards available but data are not regularly produced by countries

Tier 3: Indicator for which there are no established methodology and standards or methodology/standards are being developed/tested

The updated tier classification contains **81 Tier I indicators, 57 Tier II indicators and 88 Tier III indicators**. In addition to these, there are **4 indicators that have multiple tiers (different components of the indicator are classified into different tiers)**.
